## FOR IMMEDIATE RELEASE

### **ACOM's iSERIES 400 DIVISION INTRODUCES FAST, FLEXIBLE SORT OPTION FOR AWARD-WINNING EZPRINT/400 eFORMS/CHECKS/LABELS SOFTWARE**

ATLANTA AND LONG BEACH, California – Responding to strong user interest, the Atlanta-based iSeries 400 Division of ACOM Solutions, Inc. has introduced a Sort feature for its EZPrint/400 electronic forms/checks/labels software solution that provides fast automatic sorting at four user-designated levels for forms production, and five levels for production of MICR laser checks, it was announced today by Mark Firmin, division vice president of sales.

“The new Sort feature is an add-on option to EZPrint/400 that conserves time and personnel resources by performing a tedious task that most often has been done manually,” Firmin said. “In developing the Sort feature, ACOM developers devised a unique approach that avoids the common practice of using of Structured Query Language (SQL) calls, instead embedding the functionality in the Merge process, dramatically accelerating the sorting activity.”

According to Firmin, the EZPrint/400 Sort feature is scheduled for shipment by June 1, priced at \$995.00.

The feature was initially conceived for use with MICR laser check printing, since many companies partition their check runs by criteria such as dollar amounts and overflow pages, Firmin noted. For example, in an ascending dollar amount sort, larger checks requiring manual signature would be grouped by field at the beginning or end of the run, making them easy to locate and remove from the workflow process. Similarly, checks with extensive overflow pages that cannot be handled by folder-sealer or folder-inserter equipment can be removed and handled as needed.

Equally valuable in forms printing applications, sort criteria can include such fields as vendor number, zip code, street address, fax number, e-mail and others. Invoices, for example, can be set up to print based on factors such as ascending or descending vendor number, billing date, terms, and billing history, among others.

“In our periodic canvass of our customers wants, needs and preferences, many expressed strong interest in a Sort feature,” Firmin said. “We are particularly pleased to accommodate their needs with one that sets a new standard for speed and flexibility.”
