

FastDoc Capture

Eliminate Manual Keying of Index Data

Scan with any document scanner or multi-function peripheral, automate the capture of index fields with Optical Character Recognition, assure accuracy with database look-ups, and deliver data and images straight into Microsoft SharePoint or other ECM system – all for an investment far less than you might expect.

Any organization seeking a capture solution that delivers the power of full-featured OCR in a cost-efficient, easy-to-implement and use package will welcome FastDoc Capture.

FastDoc Capture is Datacap's newest, feature-rich, entry level capture product. It combines unrivaled levels of capture automation and ease-of-use at a price point typically associated with basic capture offerings with no recognition.

The attractive interface delivers essential document capture functionality to any organization seeking to accelerate the scanning and indexing of records.

Key Benefits

- Full featured recognition at an entry level price
- Capture and ID new documents without complicated setup
- Dynamic user friendly interface

FastDoc Capture

Automatic Data Recognition

Populate index fields automatically using powerful OCR capabilities, virtually eliminating the need for manual keying of data.

Streamlined Configuration

Set-up new document types in seconds without complicated templates or expensive programming. FastDoc Capture remembers document types and field data locations automatically.

No Limits

There are no limitations on the type, number or volume of documents that can be used with FastDoc Capture. There are also no cumbersome hardware dongles required.

Single, Intuitive Interface for All Activities

Utilizing the design concepts made popular by easy to use image management tools like Google™ Picasa™ or Apple® iPhoto®, FastDoc Capture incorporates scanning, document separation and verification into one streamlined package.

Wide Support of Scanners and Images

FastDoc Capture supports any scanner or MFP currently available as well as accepting files of previously scanned images.

Integrated Support for SharePoint

Scanned documents and related indexes are automatically stored and indexed for instant access and retrieval.

Multiple ECM or ERP system support with Universal Data Export

Integrate documents and indexes with your current ECM or ERP systems using a configurable export.

- Reduced operating costs
- Reduced data input errors
- Improved process throughput

- Reduced training costs
- Improved efficiency
- Decreased time and costs to move new documents into production

- Reduced operating, support and maintenance costs
- Reduced downtime due to hardware failures
- Predictable and manageable growth and expansion across processes

- Reduced training and support costs
- Faster time to production
- Reduced user errors

- Leverages and extends current investments
- Reduced setup and operating costs

- Reduced storage and retrieval costs
- Reduced operating costs
- Improved process efficiency
