

**FOR IMMEDIATE RELEASE****Mobile Access to ACOM's EZContentManager: Manage, Download, Fax, Email and View Enterprise Documents From BlackBerry Device Using WICKSoft Mobile Documents**

LONG BEACH, California and OTTAWA, Ontario, December 17, 2007 – Users of ACOM's robust, enterprise-level EZContentManager [document management solution](#) can now access, manage and distribute documents from the road using the BlackBerry® smartphone by Research in Motion (RIM) (Nasdaq: RIMM; TSX: RIM), the result of a strategic partnership between ACOM Solutions, Inc. and mobile document access (MDA) provider, WICKSoft Corporation, the companies announced jointly today.

EZContentManager, a web-based content and [document management system](#), allows companies to centralize corporate files of any type from any source in a single password-secured data repository, with browser-driven retrieval and distribution. Internally generated documents are indexed and archived automatically as they are produced, while externally obtained documents are indexed as part of the scanning/archiving process. Documents can be retrieved under metadata or full text search.

"Any document or capability in EZCM that is available from the desktop is also available to mobile users from their BlackBerry," said ACOM Product Manager, Angela Doolittle. "Operation is simple and intuitive. Users simply log in on their Blackberry device, select WICKSoft Mobile Documents from a list of mobile applications, select ACOM EZCM and proceed through a series of menus until they isolate the domain and the document they need. Features such as scrolling and zoom make review of documents quick and easy, and users can perform any activity they are authorized for directly from the Blackberry, including Create, Delete, Email a document as an attachment, Rename, and more."

WICKSoft Mobile Documents™ is widely regarded as the best mobile document access solution in the wireless market due to its multi-tiered security architecture and ease of use. In addition to being the industry leader, WICKSoft Mobile Documents is the only solution that allows EZCM users to wirelessly manage, download fax, email, and view documents using the BlackBerry smartphone. No modification to the EZContentManager software or architecture is required for mobile deployment.

"We are excited to provide WICKSoft Mobile Documents as a solution in the electronic document and content management space," said Will Hickie, President and CEO of WICKSoft. "Our partnership with ACOM enables us to deliver a secure mobile document access solution to customers who are using the EZContentManager system from virtually any location inside or outside the office."

Mobile EZContentManager can be extremely valuable in a range of industries and professions, such as governments, accounting and law firms, media, construction and real estate and healthcare, Doolittle noted.
