

ACOM's Check Stock Security Features

According to recent studies, more than 500 million checks are forged annually, with losses totaling more than \$10 billion... and growing. In order to help your organization combat check fraud and deter would-be criminals, the following security features, both obvious and subtle, are incorporated into ACOM's Security Check Stock.

THIS CHECK IS VOID WITHOUT A BLUE & GREEN BACKGROUND AND AN ARTIFICIAL WATERMARK ON THE BACK - HOLD AT AN ANGLE TO VIEW

Copier-Void Design
VOID will appear repeatedly on the face of the check if processed through single-color copiers and most full-color copiers.

Rainbow Prismatic Colored Stock
Gradient colors are difficult to photocopy accurately.

TonerGrip®+
This paper treatment makes it difficult to remove or change the toner ink from laser printed documents.

Chemically Reactive Paper
A brown stain appears when activated by a chlorine-based eradicator.

CheckProtect™ with TonerGrip®+
(optional upgrade) Chemical Stain: A multilingual VOID (English, Spanish, French) appears when activated by a chlorine-based eradicator.

Invisible Fluorescent Fibers
Fibers appear only under ultraviolet light.

Micro-Printing
Line borders on check are micro-printed with words and symbols too small to be photocopied or scanned.

BORDER CONTAINS MICROPRINTING

Security Feature Box
Describes some of the visible and hidden security features.

ABA Check Endorsement Clause
American Banking Association endorsement clause is printed on the back of the check and verifies the colored check stock and pantographic background.

Watermark Certification Seal
EPA approved watermark certification seal certifies all legal ANSI & ABA specifications for check printing have been met. These watermarks on the back of the check cannot be photocopied.

Endorsement Pantograph / Copy Void
Single-color pantograph makes the endorsing signature difficult if not impossible to scan or copy. This area also has a Copier-Void feature built into the background.

Non-Negotiable Stub Backer
"Non-Negotiable" is printed on the back of the check stub to prevent fraudulent use of the check stock.

Sequential Numbering
Located on the back of the check stock. Used for internal control purposes.
