

FOR IMMEDIATE RELEASE**ACOM Solutions, Inc. Launches new MICR Printer; MICR Version of the Xerox Phaser 4510 Laser Printer is 25 Percent Faster than Predecessor**

LONG BEACH, California, April 26, 2007 – Following closely to the Xerox Corporation launch of its new Phaser 4510 line of workgroup printers, the [MICR Printing](#) division of ACOM Solutions, Inc. has introduced its network-ready Xerox Phaser 4510 MICR Laser Printer Solution, it was announced today by Vice President Sam Mikhail.

The new [MICR printer](#) (Magnetic Ink Character Recognition) prints checks at speeds of up to 45 pages-per-minute at 1200 x 1200 dpi resolution as well as provides enhanced access, alert and operator controls. Shipping is scheduled for early May, 2007, with single unit prices beginning at \$2,995.00.

“This new check and financial document printer’s speed is 25 percent faster than our former fastest offering,” Mikhail said. “It installs easily, works hard and trouble-free for long stretches with little tending, and is configurable to suit check printing deployment ranges from medium volumes to very high, continuous operations.”

The new printer is being released in two versions: the Certified, dedicated MICR-only version and the Secure Version, which features a three-position keylock that allows switching between MICR printing and conventional laser printing and will disable printing altogether in the OFF position. The Secure version is suitable for companies interested in implementing physical security over the check printing process and looking for the highest level of security features available.

Key features of the Xerox Phaser 4510 MICR Check Printer Solution from ACOM include:

- Fastest print speeds in its workgroup printer class; eight-second first-page out
- Encryption of print files over IPP and/or 802.1x wired network
- Security-code access to printer operations
- Embedded Web page for remote configuration and management
- Supply-level alerts (paper, toner) on printer panel, PC screen, embedded Webpage
- Network ready, with automated installation support
- MICR-only or multi-mode versions
- 700 sheet total input (two trays) capacity with two additional 550 sheet trays optional

- Auto-sensing of paper size and type
- 533 MHz processor, 512 MB maximum RAM, optional 40 MB hard drive
- Enhanced jam-resistant pick-and-feed operation
- Monthly duty cycle up to 200,000 prints
- Optional Duplex printing

For added security, a removable secure USB drive option is available with both versions of the 4510 printer. The security card stores authorized signatures and the MICR font and when this option is deployed, users cannot print valid checks unless the card is inserted. It provides great control over the check printing process and acts as an effective deterrent against check fraud.

ACOM reengineers Xerox printers to withstand the rigors of MICR printing in its own laboratories with the support of Xerox engineering personnel, concurrently developing MICR toner to the exact requirements of the specific printer model. Its toners meet or exceed the quality standards for adherence and reliability set by the American Bankers Association (ABA) and the American National Standards Institute (ANSI).

In addition to the MICR printers, ACOM also offers a complete line of secure payment software that is available in Windows and System i native versions for companies looking for a turnkey laser check printing solution.

About ACOM Solutions, Inc.

Now in its 24th year of business, ACOM Solutions, Inc. develops and implements advanced modular software systems for electronic [document management](#), document output, secure corporate payments, and B2B EDI/XML e-commerce applications, marketing them domestically and through overseas partners. Corporate headquarters are in Long Beach, California. For more information about ACOM products and services, call 800-699-5758, email sales@acom.com, or visit <http://www.acom.com>
