

FOR IMMEDIATE RELEASE

ACOM Solutions, Inc. Introduces EZPayManager Version 7.9.2 Payment Management Solution with Role-based Controls and Optional Second Level Approval Module

LONG BEACH, California, September 25, 2006 – The eBusiness Division of ACOM Solutions, Inc., a leading provider of back office process optimization software systems, has introduced Version 7.9.2 of its EZPayManager [payment management solution](#) featuring programmable role-based controls and an optional module for programmable Second Level Approval, it was announced today by Sam Mikhail, vice president.

EZPayManager provides a single payment platform that can support both [check printing](#) as well as electronic [ACH payments](#), enabling business users to manage and facilitate the movement of vendors to ePayments.

According to Mikhail, the new version, which runs under Microsoft Windows, allows multiple individuals to be defined and linked to the payment process by their role in the process rather than by their individual profiles. A user management interface provides the means to edit and delete users and assign roles as well as to view the security log. In previous versions, permissions were set up by an individual, with any change requiring a change to the user's profile or the creation of a new profile. The Administrator role is predefined, by default conferring full control over all EZPayManager features and functions.

The optional Second Level Approval module provides dual-custody control over sensitive payment processes, Mikhail said.

"In using the module, the administrator sets the parameters requiring second level approval using the user management interface," he said. "These parameters establish which users are responsible for approving what. When a user with second level approval responsibility logs in, a dialog box pops up if there is an item pending his/her approval. If approved, the item moves forward through EZPayManager normally. If rejected or still in pending status, it will not be processed for export and will be held for further action."

The Second Level Approval module applies flags to events automatically and, as with approval roles, it allows user definition of the specific events. Examples of items commonly subject to second level approval might include changes to checkbooks or bank accounts, payees,

maximum check authorizations, ACH maximum transaction amount set-up, batches imported to EZPayManager from the payables software, and more.

"We expect the new version of EZPayManager and the Second Level Approval module to be well-received," Mikhail said. "Role-based control provides yet another dimension of convenience and efficiency, while Second Level Approval enhances the security of the corporate treasury, increasingly a factor in complying with government requirements under the Sarbanes-Oxley Bill, Uniform Commercial Code (UCC) guidelines and others."

EZPayManager v.7.9.2 is available to users under maintenance contract without charge by contacting ACOM. The Second Level Approval module is currently available to existing customers and is priced at \$2,495. New customers can have it installed with their solutions at the time of purchase.

About ACOM Solutions, Inc.

Now in its 23rd year of business, ACOM Solutions, Inc. develops and implements advanced modular software systems for document output management, content management, secure corporate payments, and B2B EDI/XML e-commerce applications, marketing them domestically and through overseas partners. Corporate headquarters are in Long Beach, California; System i Software Division headquarters are in Duluth, Georgia; and regional offices are located in several major U.S. cities.
