

- Reduce Costs
- Automate
- Improve Efficiency

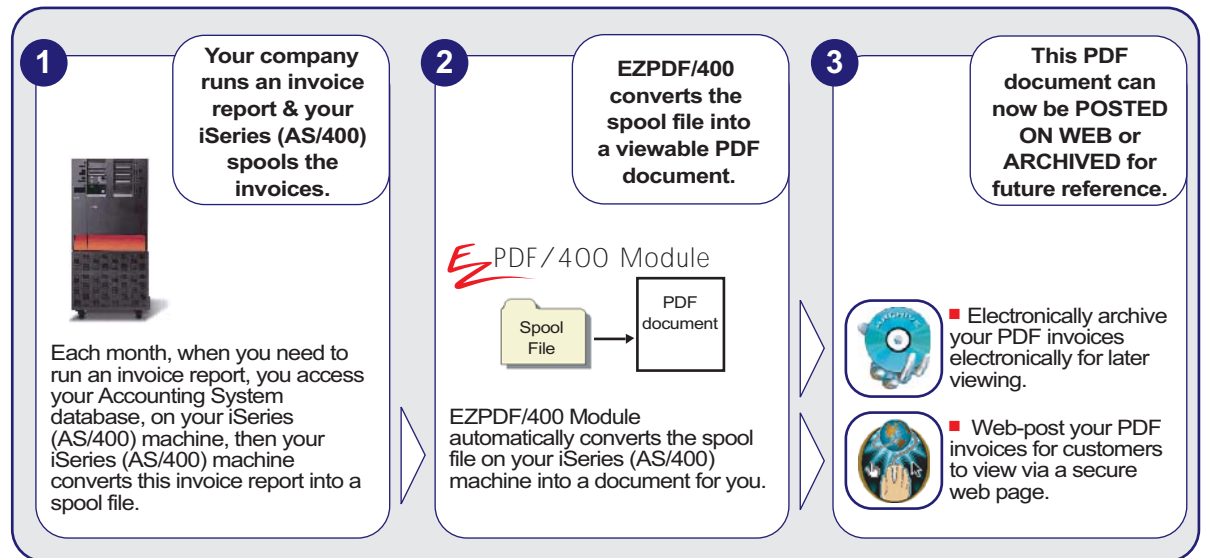

Would you like an economical method of storing your documents?

Would you like to better serve your customers and employees by posting your documents on the web?

Now you can... with ACOM's **EZPDF/400 Module!**

EZPDF/400 Module converts your **Purchase Orders, Invoices, Statements, Expense Reports** or other iSeries (AS/400) documents into PDF** format. Once in PDF format, these documents can be posted on the web or saved electronically for future reference!

EXAMPLE: You want to save all your monthly invoices electronically.

EZPDF/400 Module Overview:

- EZPDF/400 Module enables you to convert a spool file into a PDF document. Now you can **view documents on-screen, print, post on web, or electronically file** these PDF documents for later viewing or handling.
- Unlike other PDF converters, there is no complex implementation required to put EZPDF/400 Module to work.
- Works seamlessly with ACOM's EZeDocs/400 eForms Solution; EZeDocs/400 eForms Solution merges a form with a spool file, then EZPDF/400 Module converts the merged spool file into a PDF document. (EZeDocs/400 eForms Solution allows you to print all forms to a laser printer, using blank paper, or to distribute multiple copies to multiple printers, all from your iSeries or AS/400 machine - see ACOM's EZeDocs eForms Solution datasheet for more information.)

EZPDF/400 Module Details:

EZPDF/400 Module adds significant convenience, efficiency and control features for EZeDocs/400 users, since PDF is rapidly becoming a standard. People need a way to view their documents without necessarily going through the printing process every time they need to access them, and once the document is in PDF format, there is a great deal of handling flexibility. Conversely, it is impossible to view a document in PCL*** format since the spool file is generated in code and there is no common PCL viewing utility. If a PCL document is emailed, it is similarly unreadable.

EZPDF/400 Module functions include:

- PDF command available in eForms and Checks modules to rename converted documents and identify bursting points.
- Identify specific directory on IFS or QDLS for converted files.
- Convert SCS spool files to PDF.
- Create color, text-searchable PDF's.
- API available for embedding in CL programs.

ACOM's PDF Module is incorporated into currently shipping versions of EZeDocs/400 eForms Solution and EZPayManager/400 Solutions and is activated with an authorization code. It can also be purchased as a standalone solution. EZeDocs/400 solutions for forms or labels that are already in service can be field-upgraded via CD, or users can download the software upgrade from ACOM's secure website.

Because it is integrated directly with EZeDocs/400 and EZPayManager/400, ACOM's PDF Module operates seamlessly as a utility that can be called like any other of the system's functions.
