

**FOR IMMEDIATE RELEASE****ACOM's Northwest European Reseller Partner Rainbow Solutions N.V.  
Adds EZContentManager Document Management System to Product Stable**

LONG BEACH, CA and 's-Hertogenbosch, NL, September 17, 2007 – Rainbow Solutions B.V., a long-time Netherlands-based reseller partner of ACOM Solutions, Inc., has expanded its relationship with the California company with the addition of ACOM's EZContentManager (EZCM) [document management system](#) to its product portfolio, it was announced today by ACOM Vice President James R. Scott and Rainbow Solutions Account Manager Wim Derks.

EZContentManager is a web-based content and document management system that allows organizations to centralize corporate files of any type in a single password-secured data repository, with browser-driven, on-board retrieval and distribution engines providing fast and convenient searching and management.

According to Derks, Rainbow Solutions' EZCM initiative commenced in early 2007 and currently, the company has logged two installed sales with two more in process and about 10 in various stages of negotiation.

"EZContentManager presents Rainbow Solutions and its customers with significant new opportunities," Derks said. "The concept of centralized document management has been well-received in Europe and there are a number of strong competitors in our market. As an open, [web-based document management solution](#), EZContentManager competes well. It fits nicely with our client base, offering the advantages of reasonable pricing, quick and easy installation, only minor training requirements, and a great deal of functionality for the price."

The solution interfaces directly with ACOM's EZeDocs document [output management](#) solution, which Rainbow Solutions has represented in Europe

for more than 10 years, allowing user companies to attach metadata and store documents automatically as they are generated. Documents from external sources can be scanned into the system, with the metadata attached automatically in the scanning process. Documents can then be retrieved either by metadata or under full-text search.

"The fact that it is a platform-agnostic and standards-based, rather than a proprietary system, eliminates data format problems while enabling people to use it intuitively," Derks said. "Almost everyone is comfortable with the Google-like interface that is used to access documents and to manage the solution. Standards-based architecture components such as the SQL data repository help control costs and permit rapid installation, fast implementation and fast document import."

Key elements of the EZContentManager solution include, among others:

- Browser-based operation (Internet Explorer, Netscape, Firefox)
- Centralized SQL document repository
- Automated capture/indexing/importing of documents through ODBC
- Support for Java 6.0 and for Tomcat 5.5
- Flexible document retention capabilities
- Multi-level password security
- Document distribution by laser printing, fax/email, conversion to other formats (e.g. PDF)
- Process manager for automating internal tasks (e.g. routing/approval)
- Definable version controls

"EZContentManager is part of an efficiency wave that is sweeping today's business," said ACOM's Scott. "It eliminates remote, often unknown data silos and makes all corporate information readily available

to people who need it. Because it integrates directly with EZeDocs, it is an ideal addition to computing environments that Rainbow Solutions serves. With EZContentManager, companies can expect improved customer service, more efficient management and more effective compliance with industry and government requirements. We are delighted that Rainbow Solutions has elected to take this system into the European market.”

#### **About Rainbow Solutions B.V.**

Based in historic 's-Hertogenbosch, The Netherlands, Rainbow Solutions has sold ACOM's EZeDocs/400 document output management solution into its BENELUX, German and French markets since the mid-1990s. The 20-year old company has specialized in products for the iSeries-AS/400 market, among them systems for high-availability, software management, software testing and security, but EZContentManager is first foray in to centralized corporate document management. The company also sells an enterprise resource planning solution for the Microsoft environment.

#### **About ACOM Solutions, Inc.**

Now in its 24th year of business, ACOM Solutions, Inc. develops and implements advanced modular software systems for document output, document/content management, secure corporate payments, and B2B EDI/XML e-commerce applications, marketing them domestically and through overseas partners. Corporate headquarters are in Long Beach, California; System i Software Division headquarters are in Duluth, Georgia; and regional offices are located in several major U.S. cities.
